

HUTCH PLUS™ 18

Product Description

Hutch Plus™ 18 is designed primarily for commercial and show rabbitries. It is formulated to meet the needs of does and litters, for optimal growth in meat rabbits, and for keeping rabbits in good condition while subjected to the stress of showing. Although **Hutch Plus™ 18** is high in fiber, it is recommended that additional long-form fiber (hay) be fed.

Available in a 50-lb bag.

Features and Benefits

Fixed Components - *A consistent formula using only the highest quality ingredients to prevent sudden changes in the diet and to improve digestive health and function.*

Chelated Trace Minerals - *The greater absorption and utilization of zinc, copper, and manganese helps to meet the increased needs of lactating does and bone, muscle, and tissue strength of growing rabbits. In addition, chelated trace minerals support overall reproductive performance and efficiency in breeding rabbits.*

MosPlus™ - *Supports the presence of beneficial bacteria and helps stabilize the rabbit's sensitive digestive tract, ultimately promoting good animal health.*

Yeast Culture - *Supports a healthy, functional microbial fermentation in the rabbit cecum and colon, promoting fiber digestion.*

Suggested Feeding Recommendations:

Blue Seal® Hutch Plus™ 18 is designed specifically to be fed to rabbits in accordance with the following suggested feeding program:

Hutch Plus™ 18 may be fed to all rabbit categories but we specifically recommend it for normal growth, and the pregnant doe. Provide clean, fresh water at all times.

| <u>Function</u> | <u>Hutch Plus 18 (in approx. oz)</u> | <u>Category</u> |
|-----------------|--------------------------------------|----------------------------|
| Growth | 4 to 8 (free choice) | Growth |
| Maintenance | 3 to 6 (restrict) | Pets, herd bucks, dry does |
| Gestation | 4 to 8 (restrict) | Pregnant doe |
| Lactation | 8 to 16 (free choice) | Doe nursing litter* |

*Total doe and litter at weaning may consume up to about 48 oz/day.

Management and genetics will have an affect on the effectiveness of the use of this product without additional roughage sources. Although this product can be used without hay, feeding a supplemental roughage will reduce the incidence of digestive disorders.

The suggested feeding program above is intended solely as a guide. The variables of management, environment, and breed may dictate changes in the animals' requirements.
